

The CV-2049 Cycle Vise is designed to mount directly to all HMC Lift Tables. It is secured to the table using 10 sets of 5/16-18 x 3/4" Hex Bolt, Lock Washer, & Nut. To accommodate wide front tires, P/N CV-2045 may be mounted on the outside four holes. In this case, the 3/8-16 Eye Bolt must be used as 1 of the fasteners. The Vise can be mounted in two locations to accommodate longer or shorter wheel bases. For long wheel base bikes mount the Cycle Vise all the way forward.

Once the bike has been held in place it should always be strapped down and secured to the EYE BOLTS.

Maintenance: If the crank becomes difficult to turn, you may have to remove the static Vise Jaw (P/N 2042) and crank the moveable jaw out until it releases from the Crank Tower. This will allow you to grease the Static Nut inside P/N 2043 and grease the Threaded Rod inside the Crank Tower.
